

VISIONARCH Fulham Centre

Bringing together the existing building and new extensions into a more coherent whole, providing 5 floors of contemporary, bright office space with panoramic views

Client brief

This redevelopment offers 5 floors of contemporary, bright office space with panoramic views and good connections to London's West End, London City and Heathrow airports.

Our scope

Vision Arch commenced works by providing a 2m x 3m mock-up of the curtain walling, to present the various glass types and the connection to the floor slab.

Various testing was carried out to provide thermal analysis and condensation calculations, PPC coating and anodising testing and desktop acoustic studies.

The north elevation featured a FWS 60+ glazed capped curtain walling system with ground floor doors and an architectural folded perforated aluminium feature cladding panel system on the ground floor.

Working around the building envelope, Vision Arch provided a Schuco VISS iXtra large format curtain walling to the south-east entrance, including a large single automatic sliding door and rooftop balustrade.

The south elevation consisted of a FWS 60+ capped curtain walling system with auto bi-parting doors on the ground floor, FWS 60+ Curtain Walling to Level 05, louvres to level 06 and refurbishment / replacement of 102 windows on the main facade.

Within our package we included the double skin insulated blockwork wall along with the insulated render system. An add-on package to the facade incorporated suspended and LED flag signage to the retail areas.

Client

Key challenges

1. Logistically challenging installation in a central London location.
2. An aggressive programme to allow early occupancy of tenants during the build.
3. Multiple design elements to manage, coordinate and deliver.

The result

High quality landscape design at the entrance and 2nd floor terrace with a new, landscaped roof terrace on the 6th floor level. Vision Arch have brought together the existing building and the new extensions into a more coherent whole, which allows further natural daylight into the existing office space.

One of the ways in which this is achieved is through the use of the new full-height glazed facades. A combination of transparent and opaque glazed panels achieves a balance between illumination levels and privacy to the office space. Bespoke projecting round signage at ground floor highlights the retail frontage. The design responds to the unusual geometry of the triangular site at various scales.

“The Vision Arch Team have performed very well to date on our Fulham Project, taking early Design Information and detailing it through to buildable solutions. Works on site have started recently and the Delivery Team is making good progress in a safe, professional, and diligent manner. This is the second project that I have used Vision for the complete Facade Package and would not hesitate to use them again in the future.”

Jody Bishop, Head of Construction – Romulus Construction
